10 Why Us

VINOVA

Established for 10+ years in Singapore. First in Vietnam to provide cybersecurity solutions and products for domestic and international customers.

Over 20 years of combined experience in the field of network security, we have since provided information security services to over 1,000 domestic and international organisations and businesses.

Accredited by CREST as a Managed Security Service Provider (MSSP) for Penetration Testing Services

We are also a member of

Who Is CREST?

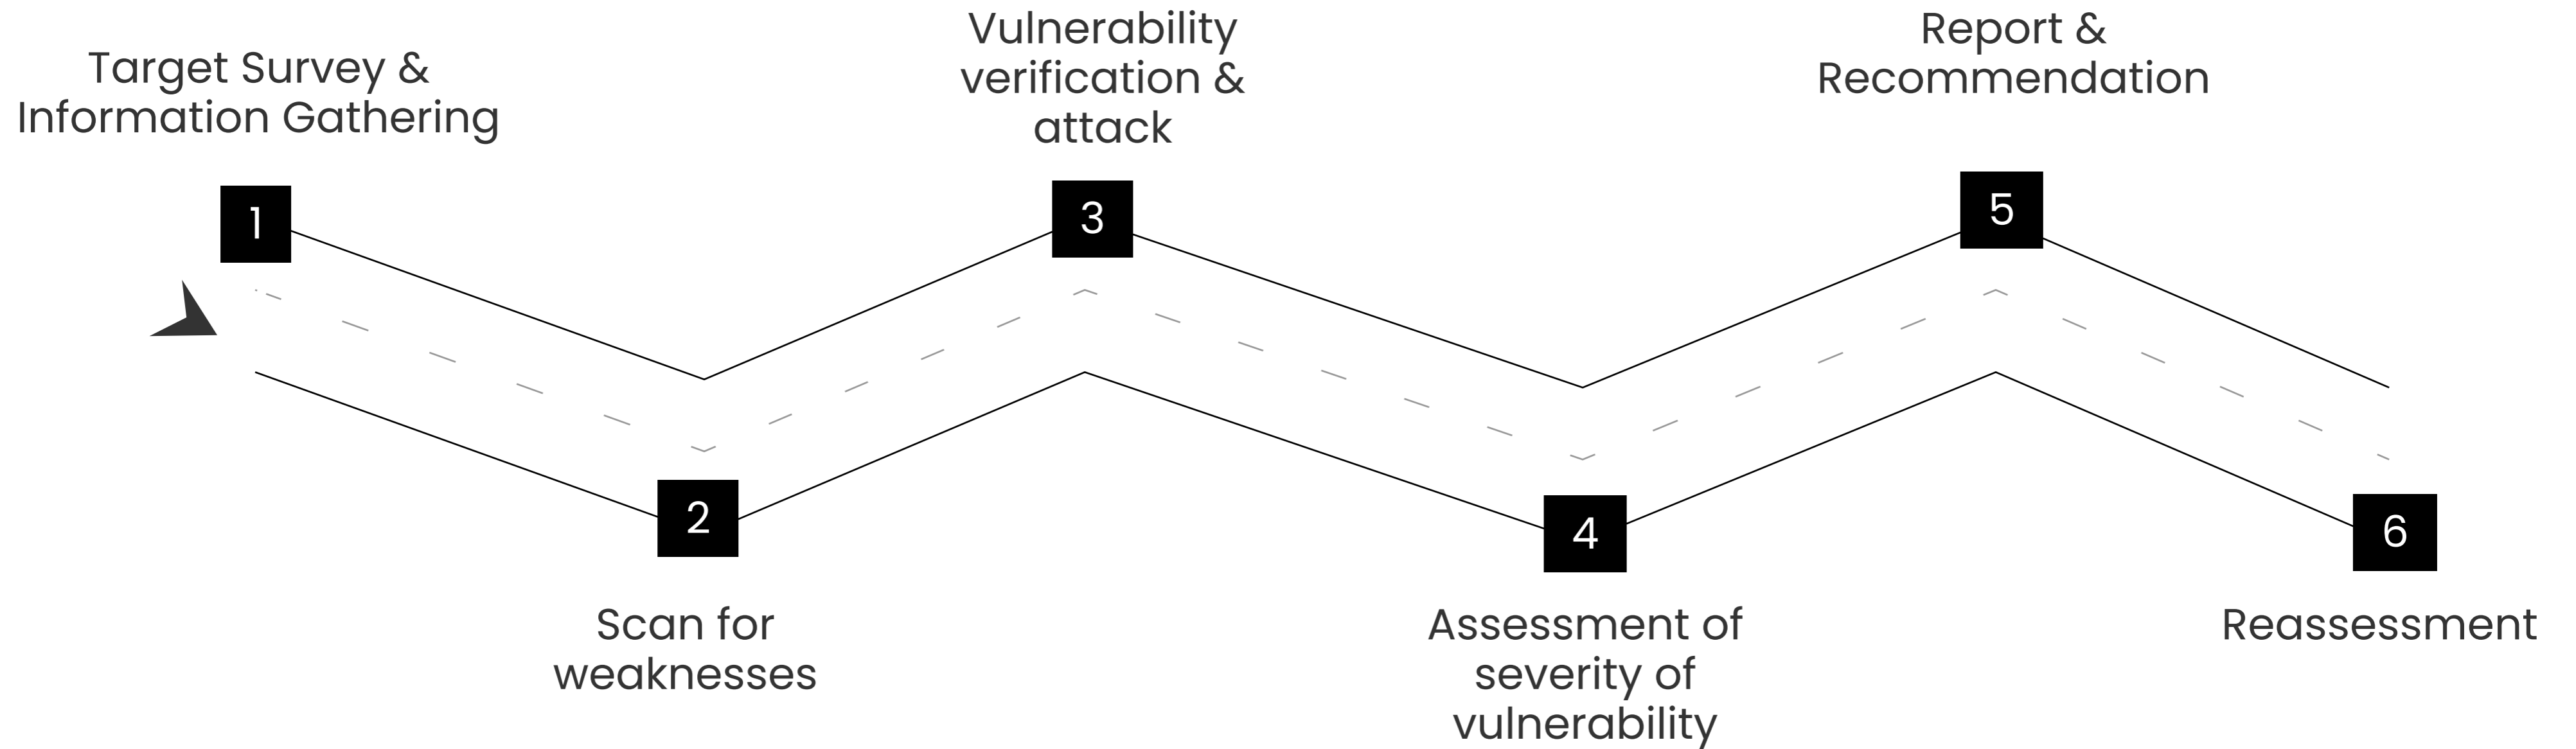

CREST is an international not-for-profit, membership body representing the global cyber security industry.

CREST's goal is to help create a secure digital world for all by quality assuring our members and delivering professional certifications to the cyber security industry.

CREST members undergo a rigorous quality assurance process and employ competent professionals. Organizations buying their cybersecurity services from our members do so with confidence.

Journey Of The Security Process

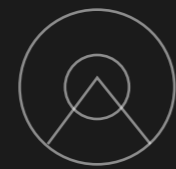

Our Security Services

Security Assessment

Perform simulated attacks to expose security flaws

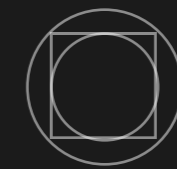

Consulting & Incident Response

Consultation, risk compliance and optimisation services

Training & Cybersecurity Drills

Perform drills and cybersecurity training for your employees

Security Operation Centre (SOC)

A 360 degree operation on monitoring and alerting cyber attacks

Security Assessment

Penetration Testing (Pentest)

Penetration tests are invaluable for improving cyber security. We help to find unpatched vulnerabilities in systems, applications, and networks – uncovering as many exploitable vulnerabilities as possible.

Features

- Assists in assessing the system's cyber security
- Detects dangerous security vulnerabilities on the system
- Improves system defense and minimizes system damage
- Supports system and administration and enhances business reputation

Security Assessment

Red Team

A red team exercise tests the ability of the defenders (the 'blue team') to detect the attack and respond to it. We mimic a real-life attacker, using any combination of tactics, techniques, and tools to access target systems or data.

Features

- Includes cyber security experts thinking and acting like hackers
- Operations are not restricted in the manner, scale, and extent of attacks
- Focuses on the most important goal that customers want to achieve
- Authorized to attack and exploit the system

Security Assessment

Vulnerability Assessment

Discover vulnerabilities of all your networks, operating systems, and applications wherever they are (such as perimeter, internal networks, cloud, etc.).

Features

- Automated scanning by cybersecurity scanners, manual verification of results
- Reports of identified vulnerabilities and recommended remediation generated by industry-recognized tools such as Nexpose and Rapid 7.

Security Assessment

Source Code Review

Analyse your code to find more complicated security exploitation vulnerabilities that is not easily detected. This service complements penetration testing.

Features

- Our security specialists will examine your application's source code line-by-line
- Comprehensive documentation of existing security weaknesses in the application.

Consulting & Training

Consulting & Incident Response

Incident response is an approach to dealing with security breaches. The aim is to identify an attack, prevent damage and eliminate the cause of the incident. An incident can be defined as any violation of law, policy, or action that is not permitted, in relation to information assets.

Types of Consulting

- Strategic Security Risk & Compliance
- SIEM Optimization Service
- Incident Response & Remediation

Who's involved?

- IncidentResponse Manager
- Project Manager
- Security Analyst
- Coroner
- Threat Researcher
- Legal Rep

Consulting & Training

Training & Cybersecurity Drill

We organize cyber security drills to comply with the provisions of the Ministry of Information and Communications.

Types of Training

- Secure Programming
- Cybersecurity Awareness
- Cybersecurity Process
- Cybersecurity Test

Targeted Team

- Software team
- Internal security team
- All employees

Types of Drills

- Scripted Drill
- Unscripted Drill

Areas

- Information Technology System
- Industrial Control Systems/ Operation Technology

Operation

Security Operation Centre (SOC)

SOCs operate 24/7 around-the-clock, monitoring and alerting, almost immediately detecting attacks on the system. A SOC would shorten processing time, eliminate attacks, minimize impact, and prevent damage.

A SOC also provides a recovery plan, so that an IT system can return to its normal operating state. SOC would eliminate attacking behavior such as removing malicious code, blocking attack IPs, and patching application vulnerabilities.

Detailed Services

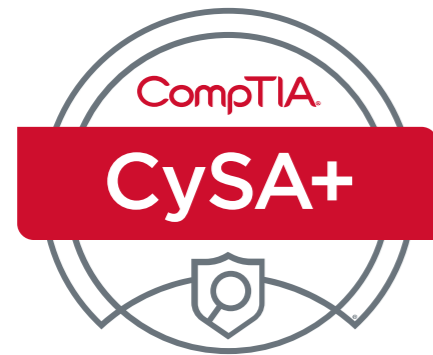

- Security Monitoring
- Managed Endpoint Security Service
- Managed SIEM Services
- Threat & Vulnerability Management AAS
- Threat Intelligence Service
- Incident Response Service

Features

- Operates 24/7 around-the-clock
- Shorten processing time

Our Certifications

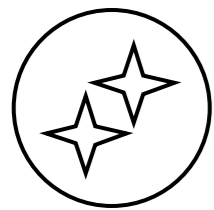

Our Clients

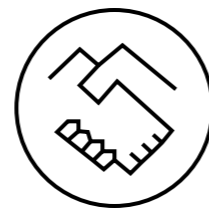

Why Us?

Our cybersecurity professionals bring deep business and technology expertise in both information technology and operational technology to help protect your digital world.

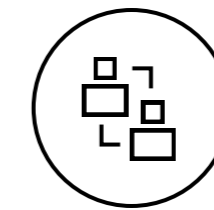

Distinctive

We keep on top of the game by working with state-of-the-art tools, top talent, and innovative thinking to battle increasingly complex threats.

Committed

Our relationships are built on responsible and reliable long-term commitment. MNCs and SMEs alike trust us to provide efficient and effective strategies.

Teamwork

Our clients love how supportive we are. We communicate in direct and honest terms, and we'll do what's best for you - after all, your success is ours too.
